

Potential applications / target groups

remote areas, islands and small communities without electricity or clean water supply = decentralised drinking water supply

medium scale systems = up to 25'000 l/d per unit

disaster relief solutions

eco-tourism / small resorts

production sites/fabrics (where drinking water has to be provided by the employer)

USP's

independent

environmentally friendly thanks to solar and wind power (possible to power by renewable energy only – no ongoing fuel costs)

sustainable, long-term solution

low energy consumption

complete unit

low maintenance requirements

On the other side, our products are not designed for the following application

waste water (grey or black water)

large scale systems (such as large scale desalination systems)

in competition with household filters (not long-lasting)

in competition/comparison with cheap but low quality goods
