

## Water treatment unit TWB 002

River "Pjandsch" at the border Afghanistan / Tajikistan. The river is dirty and people suffer from using the contaminated water.

Our solution pumps water from the river about 1km in underground pipes to the central water station.

The Tank and the water treatment unit are installed at the bottom of the tower. The pump lifts the treated water up to the tank above, which has a size of 25'000 liter.

The houses in the surrounding area are connected through a water network.

The Trunz Water System provides cleaning water for the truck driver camp.
